

I am writing to express my strong interest in the Front-End Developer position, which I found through a posting on Facebook.

I recently graduated with a Bachelor's degree in Software Engineering from Burapha University and am eager to leverage my skills in both frontend and backend development to create efficient, secure, and user-centric systems for your organization.

Throughout my studies and personal projects, I have developed a wide range of technical skills and have successfully created various applications, including:

- **A Real-time Crypto Ranking Website** built with ASP.NET, which features multiple pages displaying real-time cryptocurrency data, news, and multimedia content.
- **A One-Page Sales Page** that is fully responsive and integrates with Google Sheets for product and order management.
- **Four Telegram Bot projects** designed for user role and permission management, as well as automated response systems using Python.

I am proficient in web development with **React.js** and **Next.js**, and can design UI/UX using **Tailwind CSS** and **Bootstrap**. On the backend, I am skilled in **Laravel** and **Node.js**, with experience in developing and integrating **RESTful APIs** and managing databases with **SQL** and **Prisma**. I also have experience with **Python** for automation scripting and use **Git** and **GitHub** for source code management.

I am a quick learner and am committed to continuously improving my skills to deliver tangible value and measurable results for your company. I am confident that my qualifications and dedication make me a strong candidate for this position. I would welcome the opportunity to discuss my skills and potential with you in an interview.

Thank you for your time and consideration.

Sincerely,

Wasin Chanchaisawat
